# Welcome

AWS re:Post Private is a private version of AWS re:Post for enterprises with Enterprise Support or Enterprise On-Ramp Support plans. It provides access to knowledge and experts to accelerate cloud adoption and increase developer productivity. With your organization-specific private re:Post, you can build an organization-specific developer community that drives efficiencies at scale and provides access to valuable knowledge resources. Additionally, re:Post Private centralizes trusted AWS technical content and offers private discussion forums to improve how your teams collaborate internally and with AWS to remove technical obstacles, accelerate innovation, and scale more efficiently in the cloud.

This document was last published on July 2, 2024.

# Actions

The following actions are supported:

- [CreateSpace](#)
- [DeleteSpace](#)
- [DeregisterAdmin](#)
- [GetSpace](#)
- [ListSpaces](#)
- [ListTagsForResource](#)
- [RegisterAdmin](#)
- [SendInvites](#)
- [TagResource](#)
- [UntagResource](#)
- [UpdateSpace](#)

# CreateSpace

Creates an AWS re:Post Private re:Post.

## Request Syntax

```
POST /spaces HTTP/1.1
Content-type: application/json

{
  "description": "string",
  "name": "string",
  "roleArn": "string",
  "subdomain": "string",
  "tags": {
    "string" : "string"
  },
  "tier": "string",
  "userKMSKey": "string"
}
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request accepts the following data in JSON format.

### [description](#)

A description for the private re:Post. This is used only to help you identify this private re:Post.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: No

### [name](#)

The name for the private re:Post. This must be unique in your account.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 30.

Required: Yes

### roleArn

The IAM role that grants permissions to the private re:Post to convert unanswered questions into AWS support tickets.

Type: String

Length Constraints: Minimum length of 20. Maximum length of 2048.

Required: No

### subdomain

The subdomain that you use to access your AWS re:Post Private private re:Post. All custom subdomains must be approved by AWS before use. In addition to your custom subdomain, all private re:Posts are issued an AWS generated subdomain for immediate use.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 63.

Required: Yes

### tags

The list of tags associated with the private re:Post.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(!aws:|[a-zA-Z+=._:/]+)$`

Value Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

### tier

The pricing tier for the private re:Post.

Type: String

Valid Values: BASIC | STANDARD

Required: Yes

### [userKMSKey](#)

The AWS KMS key ARN that's used for the AWS KMS encryption. If you don't provide a key, your data is encrypted by default with a key that AWS owns and manages for you.

Type: String

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "spaceId": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [spaceId](#)

The unique ID of the private re:Post.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

User does not have sufficient access to perform this action.

HTTP Status Code: 403

### **ConflictException**

Updating or deleting a resource can cause an inconsistent state.

HTTP Status Code: 409

### **InternalServerException**

Unexpected error during processing of request.

HTTP Status Code: 500

### **ResourceNotFoundException**

Request references a resource which does not exist.

HTTP Status Code: 404

### **ServiceQuotaExceededException**

Request would cause a service quota to be exceeded.

HTTP Status Code: 402

### **ThrottlingException**

Request was denied due to request throttling.

HTTP Status Code: 429

### **ValidationException**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

## **See Also**

- [AWS SDK for Ruby V3](#)

# DeleteSpace

Deletes an AWS re:Post Private re:Post.

## Request Syntax

```
DELETE /spaces/spaceId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### spaceId

The unique ID of the private re:Post.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

User does not have sufficient access to perform this action.

HTTP Status Code: 403

## **InternalServerException**

Unexpected error during processing of request.

HTTP Status Code: 500

## **ResourceNotFoundException**

Request references a resource which does not exist.

HTTP Status Code: 404

## **ThrottlingException**

Request was denied due to request throttling.

HTTP Status Code: 429

## **ValidationException**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

## **See Also**

- [AWS SDK for Ruby V3](#)

# DeregisterAdmin

Removes the user or group from the list of administrators of the private re:Post.

## Request Syntax

```
DELETE /spaces/spaceId/admins/adminId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### adminId

The ID of the admin to remove.

Required: Yes

### spaceId

The ID of the private re:Post to remove the admin from.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

## AccessDeniedException

User does not have sufficient access to perform this action.

HTTP Status Code: 403

## InternalServerException

Unexpected error during processing of request.

HTTP Status Code: 500

## ResourceNotFoundException

Request references a resource which does not exist.

HTTP Status Code: 404

## ThrottlingException

Request was denied due to request throttling.

HTTP Status Code: 429

## ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

# GetSpace

Displays information about the AWS re:Post Private re:Post.

## Request Syntax

```
GET /spaces/spaceId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### spaceId

The ID of the private re:Post.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "arn": "string",
  "clientId": "string",
  "configurationStatus": "string",
  "contentSize": number,
  "createDateTime": "string",
  "customerRoleArn": "string",
  "deleteDateTime": "string",
  "description": "string",
  "groupAdmins": [ "string" ],
  "name": "string",
  "randomDomain": "string",
```

```
"spaceId": "string",
"statusstorageLimit": number,
"tier": "string",
"userAdmins": [ "string" ],
"userCount": number,
"userKMSKey": "string",
"vanityDomain": "string",
"vanityDomainStatus": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### arn

The ARN of the private re:Post.

Type: String

Length Constraints: Minimum length of 20. Maximum length of 2048.

### clientId

The Identity Center identifier for the Application Instance.

Type: String

### configurationStatus

The configuration status of the private re:Post.

Type: String

Valid Values: CONFIGURED | UNCONFIGURED

### contentSize

The content size of the private re:Post.

Type: Long

## createDateTime

The date when the private re:Post was created.

Type: Timestamp

## customerRoleArn

The IAM role that grants permissions to the private re:Post to convert unanswered questions into AWS support tickets.

Type: String

Length Constraints: Minimum length of 20. Maximum length of 2048.

## deleteDateTime

The date when the private re:Post was deleted.

Type: Timestamp

## description

The description of the private re:Post.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

## groupAdmins

The list of groups that are administrators of the private re:Post.

Type: Array of strings

## name

The name of the private re:Post.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 30.

## randomDomain

The AWS generated subdomain of the private re:Post

Type: String

### spaceId

The unique ID of the private re:Post.

Type: String

### status

The creation or deletion status of the private re:Post.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 30.

### storageLimit

The storage limit of the private re:Post.

Type: Long

### tier

The pricing tier of the private re:Post.

Type: String

Valid Values: BASIC | STANDARD

### userAdmins

The list of users that are administrators of the private re:Post.

Type: Array of strings

### userCount

The number of users that have onboarded to the private re:Post.

Type: Integer

### userKMSKey

The custom AWS KMS key ARN that's used for the AWS KMS encryption.

Type: String

## vanityDomain

The custom subdomain that you use to access your private re:Post. All custom subdomains must be approved by AWS before use.

Type: String

## vanityDomainStatus

The approval status of the custom subdomain.

Type: String

Valid Values: PENDING | APPROVED | UNAPPROVED

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

User does not have sufficient access to perform this action.

HTTP Status Code: 403

### **InternalServerException**

Unexpected error during processing of request.

HTTP Status Code: 500

### **ResourceNotFoundException**

Request references a resource which does not exist.

HTTP Status Code: 404

### **ThrottlingException**

Request was denied due to request throttling.

HTTP Status Code: 429

### **ValidationException**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

# ListSpaces

Returns a list of AWS re:Post Private private re:Posts in the account with some information about each private re:Post.

## Request Syntax

```
GET /spaces?maxResults=maxResults&nextToken=nextToken HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### maxResults

The maximum number of private re:Posts to include in the results.

Valid Range: Minimum value of 1. Maximum value of 100.

### nextToken

The token for the next set of private re:Posts to return. You receive this token from a previous ListSpaces operation.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "nextToken": "string",
  "spaces": [
    {
      "arn": "string",
      "configurationStatus": "string",
      "contentSize": number,
      "createDateTime": "string",
      ...
    }
  ]
}
```

```
        "deleteDateTime": "string",
        "description": "string",
        "name": "string",
        "randomDomain": "string",
        "spaceId": "string",
        "status": "string",
        "storageLimit": number,
        "tier": "string",
        "userCount": number,
        "userKMSKey": "string",
        "vanityDomain": "string",
        "vanityDomainStatus": "string"
    }
]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [nextToken](#)

The token that you use when you request the next set of private re:Posts.

Type: String

### [spaces](#)

An array of structures that contain some information about the private re:Posts in the account.

Type: Array of [SpaceData](#) objects

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

User does not have sufficient access to perform this action.

HTTP Status Code: 403

## InternalServerException

Unexpected error during processing of request.

HTTP Status Code: 500

## ThrottlingException

Request was denied due to request throttling.

HTTP Status Code: 429

## ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

## See Also

# ListTagsForResource

Returns the tags that are associated with the AWS re:Post Private resource specified by the resourceArn. The only resource that can be tagged is a private re:Post.

## Request Syntax

```
GET /tags/resourceArn HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### resourceArn

The ARN of the resource that the tags are associated with.

Length Constraints: Minimum length of 20. Maximum length of 2048.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "tags": [
    {
      "string": "string"
    }
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

## tags

The list of tags that are associated with the resource.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!aws:)[a-zA-Z+-.=:\_:/]+\$

Value Length Constraints: Minimum length of 1. Maximum length of 256.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

User does not have sufficient access to perform this action.

HTTP Status Code: 403

### **InternalServerException**

Unexpected error during processing of request.

HTTP Status Code: 500

### **ResourceNotFoundException**

Request references a resource which does not exist.

HTTP Status Code: 404

### **ThrottlingException**

Request was denied due to request throttling.

HTTP Status Code: 429

### **ValidationException**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

# RegisterAdmin

Adds a user or group to the list of administrators of the private re:Post.

## Request Syntax

```
POST /spaces/spaceId/admins/adminId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### adminId

The ID of the administrator.

Required: Yes

### spaceId

The ID of the private re:Post.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

## AccessDeniedException

User does not have sufficient access to perform this action.

HTTP Status Code: 403

## InternalServerException

Unexpected error during processing of request.

HTTP Status Code: 500

## ResourceNotFoundException

Request references a resource which does not exist.

HTTP Status Code: 404

## ThrottlingException

Request was denied due to request throttling.

HTTP Status Code: 429

## ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

## See Also

# SendInvites

Sends an invitation email to selected users and groups.

## Request Syntax

```
POST /spaces/spaceId/invite HTTP/1.1
Content-type: application/json

{
  "accessorIdsbodytitle
```

## URI Request Parameters

The request uses the following URI parameters.

### spaceId

The ID of the private re:Post.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accessorIds

The array of identifiers for the users and groups.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 1000 items.

Required: Yes

### body

The body of the invite.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 600.

Required: Yes

### [title](#)

The title of the invite.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: Yes

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

User does not have sufficient access to perform this action.

HTTP Status Code: 403

### **InternalServerException**

Unexpected error during processing of request.

HTTP Status Code: 500

### **ResourceNotFoundException**

Request references a resource which does not exist.

HTTP Status Code: 404

### **ThrottlingException**

Request was denied due to request throttling.

HTTP Status Code: 429

### **ValidationException**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

## **See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS Command Line Interface](#)
- [AWS SDK for .NET](#)
- [AWS SDK for C++](#)

- [AWS SDK for Ruby V3](#)

## TagResource

Associates tags with an AWS re:Post Private resource. Currently, the only resource that can be tagged is the private re:Post. If you specify a new tag key for the resource, the tag is appended to the list of tags that are associated with the resource. If you specify a tag key that's already associated with the resource, the new tag value that you specify replaces the previous value for that tag.

## Request Syntax

```
POST /tags/resourceArn HTTP/1.1
Content-type: application/json

{
  "tags": {
    "string": "string"
  }
}
```

## URI Request Parameters

The request uses the following URI parameters.

### resourceArn

The ARN of the resource that the tag is associated with.

Length Constraints: Minimum length of 20. Maximum length of 2048.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### tags

The list of tag keys and values that must be associated with the resource. You can associate tag keys only, tags (key and values) only, or a combination of tag keys and tags.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!aws: )[a-zA-Z+-=.\_:/]+\$

Value Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

User does not have sufficient access to perform this action.

HTTP Status Code: 403

### InternalServerException

Unexpected error during processing of request.

HTTP Status Code: 500

### ResourceNotFoundException

Request references a resource which does not exist.

HTTP Status Code: 404

### ThrottlingException

Request was denied due to request throttling.

HTTP Status Code: 429

## ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

## See Also

# UntagResource

Removes the association of the tag with the AWS re:Post Private resource.

## Request Syntax

```
DELETE /tags/resourceArn?tagKeys=tagKeys HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### resourceArn

The ARN of the resource.

Length Constraints: Minimum length of 20. Maximum length of 2048.

Required: Yes

### tagKeys

The key values of the tag.

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Pattern: ^(?!aws:)[a-zA-Z+=.\_:/]+\$

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

User does not have sufficient access to perform this action.

HTTP Status Code: 403

### InternalServerException

Unexpected error during processing of request.

HTTP Status Code: 500

### ResourceNotFoundException

Request references a resource which does not exist.

HTTP Status Code: 404

### ThrottlingException

Request was denied due to request throttling.

HTTP Status Code: 429

### ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

# UpdateSpace

Modifies an existing AWS re:Post Private private re:Post.

## Request Syntax

```
PUT /spaces/spaceId HTTP/1.1
Content-type: application/json

{
  "descriptionroleArntier
```

## URI Request Parameters

The request uses the following URI parameters.

### spaceId

The unique ID of this private re:Post.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### description

A description for the private re:Post. This is used only to help you identify this private re:Post.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: No

### roleArn

The IAM role that grants permissions to the private re:Post to convert unanswered questions into AWS support tickets.

Type: String

Length Constraints: Minimum length of 20. Maximum length of 2048.

Required: No

### [tier](#)

The pricing tier of this private re:Post.

Type: String

Valid Values: BASIC | STANDARD

Required: No

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

User does not have sufficient access to perform this action.

HTTP Status Code: 403

### **ConflictException**

Updating or deleting a resource can cause an inconsistent state.

HTTP Status Code: 409

### **InternalServerException**

Unexpected error during processing of request.

HTTP Status Code: 500

### **ResourceNotFoundException**

Request references a resource which does not exist.

HTTP Status Code: 404

### **ThrottlingException**

Request was denied due to request throttling.

HTTP Status Code: 429

### **ValidationException**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400

# Data Types

The AWS re:Post Private API contains several data types that various actions use. This section describes each data type in detail.

 **Note**

The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- [SpaceData](#)
- [ValidationExceptionField](#)

# SpaceData

A structure that contains some information about a private re:Post in the account.

## Contents

### arn

The ARN of the private re:Post.

Type: String

Length Constraints: Minimum length of 20. Maximum length of 2048.

Required: Yes

### configurationStatus

The configuration status of the private re:Post.

Type: String

Valid Values: CONFIGURED | UNCONFIGURED

Required: Yes

### createDateTime

The date when the private re:Post was created.

Type: Timestamp

Required: Yes

### name

The name for the private re:Post.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 30.

Required: Yes

### randomDomain

The AWS generated subdomain of the private re:Post.

Type: String

Required: Yes

### **spaceId**

The unique ID of the private re:Post.

Type: String

Required: Yes

### **status**

The creation/deletion status of the private re:Post.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 30.

Required: Yes

### **storageLimit**

The storage limit of the private re:Post.

Type: Long

Required: Yes

### **tier**

The pricing tier of the private re:Post.

Type: String

Valid Values: BASIC | STANDARD

Required: Yes

### **vanityDomain**

This custom subdomain that you use to access your private re:Post. All custom subdomains must be approved by AWS before use.

Type: String

Required: Yes

**vanityDomainStatus**

This approval status of the custom subdomain.

Type: String

Valid Values: PENDING | APPROVED | UNAPPROVED

Required: Yes

**contentSize**

The content size of the private re:Post.

Type: Long

Required: No

**deleteDateTime**

The date when the private re:Post was deleted.

Type: Timestamp

Required: No

**description**

The description for the private re:Post. This is used only to help you identify this private re:Post.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 255.

Required: No

**userCount**

The number of onboarded users to the private re:Post.

Type: Integer

Required: No

**userKMSKey**

The custom AWS KMS key ARN that's used for the AWS KMS encryption.

Type: String

Required: No

# ValidationExceptionField

Stores information about a field that's passed inside a request that resulted in an exception.

## Contents

### **message**

The name of the field.

Type: String

Required: Yes

### **name**

Message describing why the field failed validation.

Type: String

Required: Yes

# Common Parameters

The following list contains the parameters that all actions use for signing Signature Version 4 requests with a query string. Any action-specific parameters are listed in the topic for that action. For more information about Signature Version 4, see [Signing AWS API requests in the IAM User Guide](#).

## Action

The action to be performed.

Type: string

Required: Yes

## Version

The API version that the request is written for, expressed in the format YYYY-MM-DD.

Type: string

Required: Yes

## X-Amz-Algorithm

The hash algorithm that you used to create the request signature.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Valid Values: AWS4-HMAC-SHA256

Required: Conditional

## X-Amz-Credential

The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string ("aws4\_request").

The value is expressed in the following format: *access\_key/YYYYMMDD/region/service/aws4\_request*.

For more information, see [Create a signed AWS API request](#) in the *IAM User Guide*.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

### X-Amz-Date

The date that is used to create the signature. The format must be ISO 8601 basic format (YYYYMMDD'T'HHMMSS'Z'). For example, the following date time is a valid X-Amz-Date value: 20120325T120000Z.

Condition: X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see [Elements of an AWS API request signature](#) in the *IAM User Guide*.

Type: string

Required: Conditional

### X-Amz-Security-Token

The temporary security token that was obtained through a call to AWS Security Token Service (AWS STS). For a list of services that support temporary security credentials from AWS STS, see [AWS services that work with IAM](#) in the *IAM User Guide*.

Condition: If you're using temporary security credentials from AWS STS, you must include the security token.

Type: string

Required: Conditional

### X-Amz-Signature

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

### X-Amz-SignedHeaders

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see [Create a signed AWS API request](#) in the *IAM User Guide*.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

# Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.

## **AccessDeniedException**

You do not have sufficient access to perform this action.

HTTP Status Code: 403

## **ExpiredTokenException**

The security token included in the request is expired

HTTP Status Code: 403

## **IncompleteSignature**

The request signature does not conform to AWS standards.

HTTP Status Code: 403

## **InternalFailure**

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

## **MalformedHttpRequestException**

Problems with the request at the HTTP level, e.g. we can't decompress the body according to the decompression algorithm specified by the content-encoding.

HTTP Status Code: 400

## **NotAuthorized**

You do not have permission to perform this action.

HTTP Status Code: 401

## **OptInRequired**

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

### **RequestAbortedException**

Convenient exception that can be used when a request is aborted before a reply is sent back (e.g. client closed connection).

HTTP Status Code: 400

### **RequestEntityTooLargeException**

Problems with the request at the HTTP level. The request entity is too large.

HTTP Status Code: 413

### **RequestExpired**

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

### **RequestTimeoutException**

Problems with the request at the HTTP level. Reading the Request timed out.

HTTP Status Code: 408

### **ServiceUnavailable**

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

### **ThrottlingException**

The request was denied due to request throttling.

HTTP Status Code: 400

### **UnrecognizedClientException**

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

## **UnknownOperationException**

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 404

## **ValidationError**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
